ADVANTAGES

Connection available between Servys and all of our CashDev products.

Optimised access to information regarding the cash system and its components.

Locate your machines worldwide and check their status directly on your dashboard.

Access Servys from multiple devices (PC, phone or tablet via Servys Web) in order to manage your systems fleet anywhere and at any time.

Customise profiles with specific access to the cash systems data. The lists of daily transactions taking place on the machines can be sent to the accountant at the end of the day. The CIT can also be alerted in real time when they need to pick uo their customers cashbox or bag.

Set-up different reports for events such as deposits, withdrawals, coin and banknote stocks. The files can be then exported in various formats and printed or sent by e-mail to a preset profile.

Servys software will help you :

- see the situation of the machines
- see transactions history and statistics
- schedule events and alarms
- diagnose a breakdown on a module
- perform firmware and software updates
- generate files / imports for interfaces with other software packages

SERVYS software

SERVYS is a remote management software. It can be used with all CashDev systems. Connection between the machines and the software is based on HTML / XML protocols as well as WEBSERVICE and provides a large possibility of secure connection.

Thanks to this software, you can get information of the different types of transactions as well as events taking place on your machines, such as deposits, withdrawals, refills, etc.

A colour code will let you know the status of your cash systems and of their modules to schedule maintenance if required and if a technician's visit is necessary.
